	<p>The University has invested enormous resources to ensure sustainable water management and use. It has created a major reservoir, spread over 10 acres, with an average depth of 30 feet, by tapping a small stream passing through the campus and the many natural springs in the adjoining creeks. It has created five minor reservoirs, each of an acre or more in area and 15 to 20 feet in depth, by the creation of bandhs around existing permanent springs. While the reservoirs help in water harvesting, storm water management and replenishment of the ground water table, the university has also invested in five deep-bore wells to supply drinking water through a network of three water tanks with a capacity to store 7,00,000 litres at a time. The master plan of the campus provides for three more check dams to ensure that the water resources in the campus are well controlled, managed and utilized.</p>

	<p>The University embarked upon roof-top solar photo-voltaic installations at its Azara and Tapesia campuses with an installed capacity of 320 Kilowatts. An MOU has also been signed with North-East Electric Power Corporation (NEEPCO) to set up a solar farm in the campus to generate 2 Megawatts of electricity for domestic consumption and to feed the surplus to the national grid. The 160 kilowatt each on-grid photo-voltaic systems are now operational, one at its Azara Campus and the other at its Tapesia campus. The mega project to produce 2 Megawatts is awaiting final approval by NEEPCO.</p>
